

New HedgeHog 4 Series - 4 II, 4X

1 Chassis, 2 Options- offering Hog customers and the market in general the ultimate flexibility with the feature sets they need. High End Systems presents a new array of HedgeHog 4's; HedgeHog 4 II and HedgeHog 4 X. All sharing the same chassis but providing 2 levels of feature sets.

For the first time, customers will be able to buy the platform which is right for their current application, but now will be able to unlock additional features as and when necessary without the need to invest in new hardware. Users will be able to, with the use of a software code purchased separately, move from any version to a higher model.

This array of HedgeHog 4's are the littlest of the range and still pack quite a punch, running the same software as all the other Hogs. All models include ArtNet and CIP capabilities and are designed for small to mid level shows. They are compact, lightweight and easy to take on a plane! Running on Linux, they are fast, stable and ready to Hog.

Perfect consoles for use in school theaters, nightclubs, corporate events, medium scale rental jobs or churches. Retaining the same programming layout as their larger brother, the Road Hog 4, and being able to load show files from any of the range (and vice versa) means this compact console range is extremely flexible and easy to use.

FEATURES
